

Amendments to the Specification:

Please replace the paragraph on page 4, beginning on line 11, with the following paragraph:

--At 206, the storage location or cabinet is selected in which the print job will be stored. In one embodiment, a default storage location is selected by any suitable means, such as by an administrative user. In one embodiment, the default storage location stores all print jobs that have requested the option to print to a storage location. In another embodiment, the default storage location is suitably associated with at least one associated user. All print jobs from that at least one [[user]] user that have requested the option to print to a storage location are stored in that storage location.--

Please replace the paragraph on page 5, beginning on line 10, with the following paragraph:

--At ~~216~~214, the job manager or other suitable means sends a message via any suitable means to the raster image processor to perform raster image processing on the print job. At ~~218~~216, the raster image processor performs raster image processing on the print job without creating image files and updates the print job status associated with the print job in the storage location or cabinet.--

Please replace the paragraph on page 5, beginning on line 15, with the following paragraph:

--The print job may be printer by a printer device attached to the network at any time. To print the print job, the user selects the option to print the print job to an associated printer device by any suitable means as shown at 218. Preferably, the user selects a storage location from which a document is to be printer by any suitable means. As shown in Figure 5, the user selects the storage location from 502, 504, 506, 508, and 510. Once the user has selected the storage location, the user selects the Open button ~~542~~520 to display the contents of the storage location.--
